Actual-size printable templates for the 46 × 30 cm project model

HOW TO USE

1. Print every sheet at 100 % scale (A4, "Actual size"). Use matt/photo paper at the highest quality setting.
2. Check the 100 mm ruler below – it must measure exactly 10 cm. If not, switch off "fit to page".
3. Cut along the solid black lines. Fold along the dashed lines. Grey tabs are glue tabs.
4. "front | back" pieces: cut both, glue back-to-back around thin card (1–2 mm); fold the foot tab and glue it to the platform.
5. Box nets (books, tablet, phone, AI base): fold, glue tabs inside, stuff with card/foam for rigidity.
6. Platform skins: wrap round a card/foam box of the same size; fascia halves overlap by 4 mm at the join.
7. Stick the signboards on 3 mm foam-board, stack them with small gaps, and attach to the model.
